SUMMARY

Data Analyst skilled in Power BI, SQL, Advanced Excel and Python, with experience building scalable SQL pipelines processing 1M+ rows into Power BI dashboards. Developed reusable audit frameworks to validate data before reporting and built dashboards exposing -94% marketing ROI and 84% prime cost driven by 56% labour. Skilled in DAX, Excel PivotTables and XLOOKUP.

SKILLS

- **Tools:** Power BI, Advanced Excel, PostgreSQL, Python Scripting, Claude AI, GPT
- **Programming Languages:** Expertise in SQL, Python
- **Technical Skills:** Experienced in Data Wrangling, Data Cleaning and Data Modelling, Analysis and Data Visualization by Statistical Approach, knowledge in Cloud-based environments.

PROJECT EXPERIENCE

Restaurant Performance BI Model | [GitHub](#)

- Built scalable **ETL pipelines** from Toast, R365 and HubSpot into Analytics **data warehouse**, transforming **1M+** rows for Power BI.
- Created reusable SQL audit framework with clean efficient code, validating row counts, keys, dates, grain and business rules.
- Exposed hidden profit drain by building executive prime-cost dashboard for regional store performance analysis, pinpointing one store at **84% prime cost** from **56% labour**.
- Exposed blind digital marketing metrics by building executive **ROI %** measure for the marketing team, revealing **-94% ROI** and a major misallocated investment.
- Built business-ready documentation around **stakeholder requirements**, communicating insights clearly and presenting findings from raw-to-Power BI.
- Engineered 700-line Claude AI prompts for 8 fact and 7 dim tables, embedding inaccuracies to replicate real world data issues.

Superstore Performance dashboard | [GitHub](#)

- Exposed hidden profit erosion by building DAX measure for leakage analysis, uncovering **33% overall leakage** and a **39%** worst-store impact.
- Identified deadweight products by filtering gross sales dashboard, exposing GoodDay Biscuit at **25% Gross Profit** and only **0.6K sales**.
- Created the **star schema** of fact sales table with the dimension tables and used the **Power Query** for data manipulation like building date table.

E-Commerce Sales Performance Dashboard in Advanced Excel | [GitHub](#)

- Diagnosed margin erosion by category and discount band, exposing Office Supplies at **17.1%** and high-discount profit at **\$3,297**.
- Built **8 pivot tables** across region, category, segment, monthly trends, products, discounts, and payments, slicing **2,000 orders** analytically.
- Engineered **7** data quality checks for duplicates, blanks, dates, quantities, discounts, sales, and profit, validating raw data before analysis.

EXPERIENCE

Crew Member | McDonald's UK

- Identified disposal patterns by tracking product waste over time, reducing wastage by **20%** through operational variance analysis.
- Improved accuracy rate from **85%** to **98%** by tracking non-conformances and recurring product issues, reporting to the leadership team.
- Reduced service time from **190** to **140** seconds by analysing workflow bottlenecks and coordinating task sequencing.

EDUCATION

University of Salford | MSc Biotechnology

Jan 2024 – May 2025

- Applied **statistical analysis** using Python workflows, interpreting research datasets through **A/B testing, regression**, p-values and **correlation**.
- Applied **Python** scripting to process genomic datasets, clean structured files, run statistical analysis, and visualise biological data patterns.
